

Prescription (Rx)

Patient: Carter Roberts

Age: 78

Date: 2025-07-01

MRN: MRN100014

Diagnosis: Diabetes Type2 (ICD: E11)

Medication and Instructions:

Patient: Carter Roberts

Age: 78 years old

Diagnosis: Diabetes Type 2

Prescription:

1. Metformin 500mg

- Take 1 tablet by mouth twice daily with meals
- Purpose: Helps to lower blood sugar levels by improving the body's response to insulin

2. Glimepiride 2mg

- Take 1 tablet by mouth once daily in the morning
- Purpose: Stimulates the pancreas to release more insulin and helps the body use insulin more effectively

3. Lisinopril 10mg

- Take 1 tablet by mouth once daily in the morning
- Purpose: Helps to protect the kidneys and reduce the risk of heart attack and stroke in patients with diabetes

*Note: It is important for Mr. Roberts to monitor his blood sugar levels regularly and follow up with his healthcare provider for any adjustments to his treatment plan. Additionally, maintaining a healthy diet, regular exercise, and monitoring his blood pressure are essential for managing his diabetes effectively.

Cedar-Sinai Health System

789 Care Boulevard, Recovery Hills, FL 33101

Patient Instructions:

Dear Carter,

1. Remember to take your medication as prescribed by Dr. White, at the same time each day to ensure effectiveness.
2. Be aware of potential side effects such as dizziness, nausea, or headaches. If you experience any of these, contact Dr. White immediately.
3. If you have any concerns about your medication or its effects, don't hesitate to reach out to Dr. White for guidance and support.

Take care,

[Your Name]
