

Prescription (Rx)

Patient: Henry Anderson

Age: 55

Date: 2025-07-08

MRN: MRN100020

Diagnosis: Asthma (ICD: J45)

Medication and Instructions:

Patient: Henry Anderson

Age: 55

Diagnosis: Asthma

Prescription:

1. Albuterol Inhaler (Proventil HFA) - 2 puffs as needed every 4-6 hours for relief of acute asthma symptoms.
2. Fluticasone/Salmeterol Inhaler (Advair Diskus 250/50) - 1 inhalation twice daily for maintenance therapy to prevent asthma exacerbations.
3. Montelukast (Singulair) - 10mg tablet once daily in the evening for additional asthma control and prevention of asthma symptoms.

Instructions:

- Use the Albuterol Inhaler as a rescue medication for immediate relief of asthma symptoms such as wheezing, shortness of breath, and chest tightness.
- Use the Fluticasone/Salmeterol Inhaler regularly as prescribed to control asthma symptoms and reduce the frequency of asthma attacks.
- Take Montelukast daily in the evening to further manage asthma symptoms and improve overall lung function.
- Follow up with your healthcare provider regularly for asthma monitoring and adjustments to your treatment plan as needed.

It is important to adhere to this prescription regimen consistently to effectively manage your asthma and improve your quality of life. If you experience any worsening symptoms or side effects, please

Cedar-Sinai Health System

789 Care Boulevard, Recovery Hills, FL 33101

consult your healthcare provider promptly.

Patient Instructions:

Dear Henry,

It is crucial that you take your medication as prescribed by Dr. Foster. Remember to take it at the same time every day to ensure its effectiveness.

Be mindful of any potential side effects, such as nausea, dizziness, or headaches. If you experience any of these symptoms, please contact Dr. Foster immediately.

If you have any concerns or questions about your medication, do not hesitate to reach out to Dr. Foster. Your health and well-being are our top priority.

Take care,
