

Prescription (Rx)

Patient: Leah Turner

Age: 47

Date: 2025-07-20

MRN: MRN100022

Diagnosis: Diabetes Type2 (ICD: E11)

Medication and Instructions:

Prescription for Leah Turner, 47-year-old patient with Diabetes Type 2:

1. Metformin 500mg twice daily with meals to help control blood sugar levels and improve insulin sensitivity.
2. Glipizide 5mg once daily before breakfast to stimulate insulin release from the pancreas and lower blood sugar levels.
3. Liraglutide 1.8mg subcutaneous injection once daily to reduce appetite, lower blood sugar levels, and promote weight loss.

Please note that it is important for Leah to monitor her blood sugar levels regularly and follow a healthy diet and exercise regimen to effectively manage her diabetes. It is also crucial for her to attend regular follow-up appointments with her healthcare provider to adjust her medication regimen as needed.

Patient Instructions:

Hello Leah,

1. Take your medication as prescribed by Dr. Taylor, at the same time each day to maintain consistent levels in your system.
2. Be aware of potential side effects such as nausea, dizziness, or headache. If you experience any of these symptoms, make note of them and let Dr. Taylor know during your next appointment.
3. If you experience any severe side effects such as difficulty breathing, chest pain, or swelling, stop taking the medication immediately and contact Dr. Taylor right away.

Cedar-Sinai Health System

789 Care Boulevard, Recovery Hills, FL 33101

4. If you have any questions or concerns about your medication or its effects, don't hesitate to reach out to Dr. Taylor for guidance.

Take care and stay healthy,
