

Prescription (Rx)

Patient: Lucas Miller

Age: 60

Date: 2025-05-15

MRN: MRN100026

Diagnosis: Asthma (ICD: J45)

Medication and Instructions:

Prescription for Asthma:

Patient: Lucas Miller

Age: 60 years old

1. Fluticasone/Salmeterol Inhaler (Advair Diskus 250/50 mcg)

- Dosage: Inhale 1 puff twice daily

- Instructions: Use as a maintenance medication to control asthma symptoms and prevent exacerbations. Rinse mouth after each use to minimize risk of oral thrush.

2. Albuterol Inhaler (ProAir HFA 90 mcg)

- Dosage: Inhale 1-2 puffs as needed for acute asthma symptoms

- Instructions: Use as a rescue medication for quick relief of asthma symptoms such as wheezing or shortness of breath. Do not exceed more than 8 puffs in 24 hours.

3. Montelukast Tablet (Singulair 10 mg)

- Dosage: Take 1 tablet daily in the evening

- Instructions: Helps to reduce inflammation in the airways and prevent asthma symptoms. May cause drowsiness, so take before bedtime.

Follow-up: Schedule a follow-up appointment in 3 months to assess asthma control and adjust treatment as needed. In case of severe asthma exacerbation, seek immediate medical attention or call 911.

Patient Instructions:

Johns Hopkins Regional

321 Medical Drive, Hope Springs, TX 75001

Hello Lucas,

1. Please take your medication as prescribed by Dr. Jackson without missing any doses.
2. Be sure to watch for any potential side effects such as dizziness, drowsiness, or upset stomach.
3. If you experience any concerning side effects or have any questions about your medication, please contact Dr. Jackson immediately.

Take care,
