

Prescription (Rx)

Patient: Nathan Davis

Age: 47

Date: 2025-04-26

MRN: MRN100028

Diagnosis: Diabetes Type2 (ICD: E11)

Medication and Instructions:

Prescription for Nathan Davis, 47 years old, diagnosed with Diabetes Type 2:

1. Metformin 1000mg extended-release tablets - Take 1 tablet by mouth once daily with food in the morning. This medication helps to control blood sugar levels by decreasing glucose production in the liver and improving insulin sensitivity.
2. Glipizide 10mg tablets - Take 1 tablet by mouth twice daily before meals. This medication stimulates the pancreas to produce more insulin, helping to lower blood sugar levels after meals.
3. Lisinopril 10mg tablets - Take 1 tablet by mouth once daily. This medication helps to protect the kidneys and reduce the risk of cardiovascular complications associated with diabetes.

Please continue to monitor your blood sugar levels regularly and follow up with your healthcare provider for any necessary adjustments to your treatment plan. It is important to maintain a healthy diet, exercise regularly, and avoid smoking to effectively manage your diabetes.

Patient Instructions:

Hello Nathan,

1. Please take your medication as prescribed by Dr. Jonathan Hall. Do not skip doses or stop taking the medication without consulting him first.
2. Watch out for any potential side effects such as nausea, dizziness, or rash. If you experience any of these symptoms, contact Dr. Hall immediately.
3. If you have any concerns or questions about your medication, or if you are experiencing new or worsening

Mayo Clinic Northwest
