

Prescription (Rx)

Patient: Hannah Perez

Age: 30

Date: 2025-05-16

MRN: MRN100016

Diagnosis: Depression (ICD: F32)

Medication and Instructions:

Prescription for Hannah Perez, 30 years old, diagnosed with depression:

1. Sertraline (Zoloft) 50mg once daily in the morning. This selective serotonin reuptake inhibitor (SSRI) is commonly prescribed for depression and can help improve mood, sleep, appetite, and energy levels.
2. Bupropion (Wellbutrin) 150mg once daily in the morning. This atypical antidepressant can help with both depression and anxiety symptoms, and may also help improve motivation and concentration.
3. Cognitive Behavioral Therapy (CBT) sessions once a week with a licensed therapist specializing in depression treatment. This form of therapy can help Hannah learn coping skills, challenge negative thought patterns, and develop healthy strategies for managing her depression.

Please follow up with your healthcare provider regularly to monitor your progress and adjust your treatment plan as needed. It's important to take your medications as prescribed and attend therapy sessions consistently for the best results. If you experience any concerning side effects or have any questions, please contact your healthcare provider immediately.

Patient Instructions:

Hi Hannah,

1. Take your medication as prescribed by Dr. Davis, at the same time each day to ensure effectiveness.
2. Be aware of potential side effects such as dizziness, nausea, or rash. If you experience any of these, contact Dr. Davis immediately.

St. Mary's Medical Center

456 Healing Way, Wellness Valley, NY 10001

3. If you notice any changes in your symptoms or have concerns about your medication, don't hesitate to reach out to Dr. Davis for guidance.

Take care and stay healthy,
