

Prescription (Rx)

Patient: Aria Johnson

Age: 37

Date: 2025-06-19

MRN: MRN100010

Diagnosis: Asthma (ICD: J45)

Medication and Instructions:

Prescription for Aria Johnson, 37 years old, Asthma:

1. Albuterol inhaler (ProAir HFA) - 2 puffs as needed for wheezing or shortness of breath. Use up to every 4-6 hours as necessary for asthma symptoms.
2. Fluticasone propionate/salmeterol inhaler (Advair Diskus 250/50) - 1 inhalation twice daily in the morning and evening for maintenance therapy to prevent asthma symptoms.
3. Montelukast (Singulair) 10mg tablet - Take one tablet daily in the evening to help control asthma symptoms and reduce inflammation in the airways.

Please follow up with your healthcare provider regularly to monitor your asthma control and adjust your treatment plan as needed. Make sure to have a rescue inhaler (Albuterol) with you at all times for quick relief during asthma attacks. If you experience any worsening symptoms or side effects from the medications, contact your healthcare provider immediately.

Patient Instructions:

Hello Aria,

1. Take your medication as prescribed by Dr. White - make sure to follow the dosage instructions carefully and take your medication at the same time each day to maximize its effectiveness.
2. Watch out for potential side effects such as dizziness, nausea, or rash. If you experience any of these symptoms, contact Dr. White immediately.
3. If you have any concerns about your medication or notice any changes in your health, don't hesitate to

Cedar-Sinai Health System

789 Care Boulevard, Recovery Hills, FL 33101

reach out to Dr. White. It's important to keep him informed about how you're feeling and any changes you may be experiencing.

Take care and stay healthy,
