

Prescription (Rx)

Patient: Sofia Allen

Age: 46

Date: 2025-09-03

MRN: MRN100007

Diagnosis: Asthma (ICD: J45)

Medication and Instructions:

Prescription for Sofia Allen, 46 years old, diagnosed with Asthma:

Medication 1:

- Inhaler: Albuterol sulfate (ProAir HFA)
- Dosage: 2 puffs as needed for shortness of breath or wheezing
- Frequency: Every 4-6 hours as needed for symptom relief

Medication 2:

- Controller Medication: Fluticasone propionate (Flovent HFA)
- Dosage: 2 puffs twice daily
- Frequency: Morning and evening to help prevent asthma symptoms and reduce inflammation in the airways

Medication 3 (optional):

- Oral medication: Montelukast (Singulair)
- Dosage: 10mg tablet once daily
- Frequency: Taken in the evening to help control asthma symptoms and prevent asthma attacks

Note: It is important for Sofia to follow her asthma action plan provided by her healthcare provider, avoid triggers, and seek medical attention if her symptoms worsen despite medication use. Regular follow-up appointments with her healthcare provider are also recommended to monitor asthma control and adjust treatment as needed.

Patient Instructions:

Dear Sofia,

Mercy General Hospital

123 Health Plaza, Medical City, CA 90210

1. Take your medication as prescribed by Dr. Jennifer Kim, at the same time every day.
2. Keep track of any side effects you may experience, such as nausea, dizziness, or headaches.
3. If you notice any concerning side effects or changes in your condition, contact Dr. Kim immediately.

Take care,
[Your Name]
