

Prescription (Rx)

Patient: Matthew Clark

Age: 77

Date: 2025-07-20

MRN: MRN100012

Diagnosis: Asthma (ICD: J45)

Medication and Instructions:

Prescription for Matthew Clark, 77 years old, with Asthma:

1. Albuterol Inhaler (ProAir HFA):

- Dosage: 2 puffs every 4-6 hours as needed for wheezing or shortness of breath
- Instructions: Shake well before each use. Prime the inhaler before the first use or if not used for more than 2 weeks. Use a spacer device if necessary.

2. Fluticasone/Salmeterol Inhaler (Advair Diskus 250/50):

- Dosage: 1 inhalation twice daily, in the morning and evening
- Instructions: Rinse mouth with water after each use to prevent oral thrush. Do not use this inhaler for sudden asthma attacks; use the albuterol inhaler instead.

3. Montelukast (Singulair) 10mg tablets:

- Dosage: 1 tablet daily in the evening
- Instructions: Take with or without food. Do not crush or chew the tablet.

Please follow up with your healthcare provider in 2 weeks to assess the effectiveness of the current treatment plan and make any necessary adjustments. In case of worsening symptoms or severe asthma attacks, seek immediate medical attention.

Patient Instructions:

Matthew,

1. Take your medication as prescribed by Dr. Lee. Set a daily reminder to ensure you do not miss a dose.

St. Mary's Medical Center

456 Healing Way, Wellness Valley, NY 10001

2. Be aware of potential side effects such as dizziness, nausea, or headache. If you experience any of these symptoms, contact Dr. Lee immediately.

3. If you notice any changes in your mood or behavior, or if you have any concerns about your medication, do not hesitate to reach out to Dr. Lee for further guidance.

Take care of yourself and remember that your health is a priority. Stay in touch with Dr. Lee for any questions or concerns.

Best,
